

City of Madison
Meeting Agenda - Approved
Public Meeting
Sustainability in Zoning Code

City of Madison
Madison, WI 53703
www.cityofmadison.com

Wednesday, December 10, 2008

5:30 p.m.

210 Martin Luther King Jr Boulevard
Room 201 (City-County Building)

Note: A quorum of the Zoning Code Rewrite Advisory Committee, Madison Common Council, Plan Commission, Urban Design Commission, and Zoning Board of Appeals may be in attendance at this meeting.

If you need an interpreter, translator, materials in alternate formats or other accommodations to access this service, activity or program, please call the phone number below at least three business days prior to the meeting.

Si necesita un intérprete, un traductor, materiales en formatos alternativos u otros arreglos para acceder a este servicio, actividad o programa, comuníquese al número de teléfono que figura a continuación tres días hábiles como mínimo antes de la reunión.

Yog hais tias koj xav tau ib tug neeg txhais lus, ib tug neeg txhais ntawv, cov ntawv ua lwm hom ntawv los sis lwm cov kev pab kom siv tau cov kev pab, cov kev ua ub no (activity) los sis qhov kev pab cuam, thov hu rau tus xov tooj hauv qab yam tsawg pab hnub ua hauj lwm ua ntej yuav tuaj sib tham.

Если Вам необходима помощь устного или письменного переводчика, а также если Вам требуются материалы в иных форматах либо у Вас имеются особые пожелания в связи с доступом к данной услуге, мероприятию или программе, пожалуйста, позвоните по указанному ниже телефону и сообщите об этом не менее чем за три рабочих дня до соответствующей встречи.

Please contact the Department of Planning and Community & Economic Development at (608) 266-4635, TTY/Textnet (866) 704-2318.

1. **CALL TO ORDER**

2. **Introduction**

3. **Public Comment on “Zoning Code Sustainability Ideas” (attached)**

4. **ADJOURNMENT**

Zoning Code Sustainability Ideas

Introduction:

In October 2008, the Zoning Code Rewrite Advisory Committee (ZCRAC) approved an approach to gathering information on sustainability issues that should be considered in the rewrite of the City of Madison's zoning code. The code sets the rules and procedures for the use of land (residential, commercial, etc.) and the scale, mass and form of buildings (height, placement on lot, densities, parking standards, etc.) within the City. The rewrite of the zoning code presents the opportunity to provide recommendations to remove obstacles to sustainability, create incentives for sustainability and enact standards for sustainability.

The approach for gathering input on sustainability issues entailed:

Holding two discussion meetings during the month of November with a cross section of sustainability advocates who represented various topic areas in the sustainability spectrum—energy conservation, renewable energy, water resource conservation, green building---to generate ideas.

Holding a public hearing in early December for feedback on the ideas identified by the discussion groups.

Providing all of the information gathered to the consultants who are working with the City to rewrite the code in time for consideration in the draft documents they will present in January and February.

During the two discussion meetings, a variety of ideas were generated and categorized into broad theme areas, such as Residential and Commercial Districts, Energy, Water, etc. Broad strategies that could be applied to the rewriting of the zoning code to encourage sustainability were also identified. City zoning staff was asked whether they qualified as zoning issues. In each category, those ideas that can be addressed through zoning and which are listed first, are already addressed to some extent in the code. Those marked with ** would be possible to include in the new zoning code. Those ideas that cannot be addressed through the zoning code (e.g. issues or topics covered by other ordinances or plans, or ones addressed by state or federal law) are listed separately.

The public hearing will invite public comment on the ideas already identified, and provide a forum for any new ideas that the public feels will be important to promote sustainability within the new code.

Broad Strategies to apply to the Zoning Code Rewrite

1. Zone for future - code should reflect future needs and desires – provide a framework for what the community wants to happen (not a structure for what we can't do).
2. Pursue intensive non-single-occupancy-vehicle orientation.
3. Code should follow new urbanism principles.
4. Zoning code should apply to all districts (all uses allowed in all districts).
5. Consider establishing a Transfer of Development Rights program.
6. Provide incentives for doing the right thing.
7. Focus the code on permissible uses.
8. TNS: Implement the City's policy on The Natural Step, define what sustainability (success) means for zoning, consider the human needs element (conceived broadly) as a part of the equation in every category.
9. Inventory special requests (variances, conditional uses, etc) that could be made permitted to remove barriers to sustainability.
10. Zoning should adapt to meet the demands of climate change; use zoning to address or mitigate effects, or adapt to climate change; remove any barriers to mitigating the effects, adapting to climate change (trees, green space, mobility, renewable energy, land use).
11. Write the code to allow the city to function when automobile travel will be severely limited and oil-related products, including food and heating fuel, become prohibitively expensive because of the scarcity and high-cost of fuel.
12. Embrace and adapt to take advantage of new technologies.
13. Projects that meet sustainability principles should be eligible for waiver or bonus of zoning regulations that would otherwise limit their success. (e.g. Passive House).

Sustainability Ideas that can be addressed through Zoning

ENERGY:

1. Remove obstacles and provide incentives for other renewable energy opportunities
(wind, geothermal, etc.).
2. Allow for district cogeneration of heat and power, including geothermal.
3. Permit district co-op for alternative energy generation & neighborhood distribution.
4. Remove obstacles to renewable energy systems on buildings.
5. Allow solar power plants (small and large).
6. Allow for solar orientation—solar access, building placement, street design.
7. Allow violations of setbacks when implementing renewable energy systems.
8. Provide wind overlay on zones / districts.
9. **Create incentives for district heating/cooling in multi-use developments,
industrial and office parks.
10. **Allow for electric car plug-in, set aside space for infrastructure.

WATER:

1. Allow water storage tanks, cisterns and rain barrels.
2. Build in tree protection /tree replacement policies.
3. Allow for natural lawns and green space.
4. Reduce green space requirement if using non-mowed (natural lawn) surface.
5. Establish rules for waterfront development or development close to bodies of water.

Sustainability Ideas that can be addressed through Zoning

GREEN INFRASTRUCTURE / URBAN AGRICULTURE:

1. Protect trees, but when they are lost in the process of development they must be replaced.
(e.g., if 1 tree is removed, 2 or more must replace it).
2. Make community gardens a permitted use in all districts.
3. Provide urban agriculture (soil) overlay on zones / districts.
4. Eliminate/reduce landscape requirement for permeable paving.
5. Reduce required green space if implementing non-mowed surfaces-natural lawns,
rain gardens and prairies.
6. Allow larger food production and distribution operations within city limits.
7. Allow beehives.
8. Allow agriculture related accessory structures.
9. Allow for farmers markets as permitted use in different zones.
10. Mixed use should include urban agriculture, commercial gardens and vertical farms.
11. Allow green roofs to count towards open space requirements.
12. Percent of lot open space is permeable.
13. **Preserve and develop urban land for biomass production.
14. **Allow permeable surface requirements.
15. **Guidelines (bulk, design) to minimize amount of impervious surface, and/or
require pervious/permeable surfaces.

Sustainability Ideas that can be addressed through Zoning

PUBLIC HEALTH:

1. Use permit process to limit number/density of fast food outlets and drive-through windows
(similar to fast cash businesses, etc.).
2. Allow for pedestrian connectivity.
3. Allow for “woonerf district”—zone that is ‘car lite’ and ped / bike friendly zones.

DENSITY:

1. Increase density in nearly all, if not all, zoning districts; especially downtown.
2. Provide bonus for sustainable provisions that exceed minimum standards.
3. Allow density bonuses for green features.

MIXED USE/TRANSIT ORIENTED DEVELOPMENT:

1. Zoning should encourage mixed use, transit oriented development, especially downtown.
2. Transit hubs (and 1/8 mile radius around) should be designated TOD zones, and require mixed use and minimum densities.
3. Use incentives for transit alternatives—discourage individual parking options.
4. Allow micro, mixed use areas (‘spot’ zoning)-residential / commercial infill, corners, retail, employment, agriculture in all zones / districts.
5. Require office parks to include commercial areas so tenants can reduce transportation at lunch time.
6. Allow mixed use to include range of uses – residential, commercial, green infrastructure and urban agriculture.

Sustainability Ideas that can be addressed through Zoning

RESIDENTIAL DISTRICTS:

1. Small front yard setbacks (and porches) encourage community interaction.
2. Permit dwelling units in accessory structures –e.g. “granny-flats.”
3. Use of accessory structure for home-based business: crafts, arts, food, ‘stock in trade’
‘commodity’ selling.
4. Reduce number of garage spaces allowed.
5. Specify a mixture of housing types (densities) to be provided on each block in new developments
(minimum 4 types/block, e.g. affordable, accessible, twin, single family, apartment).
6. Remove large lot size requirements and/or decrease minimum lot size in suburban districts to
encourage density.
7. Control maximum square footage (of dwellings).
8. **Allow for lower minimum square footage (of dwellings) *amend building code*.
9. **Provide for resource sharing between parcels (water, energy from one building to another).
10. **Maximize flexibility for sustainable practices (urban ag, permaculture, etc.).

COMMERCIAL DISTRICTS:

1. Create infill opportunity zones; areas where projects are encouraged with incentives to
developers (tied to transportation).
2. **Density bonus available for LEED certification.
3. **Permit buildings to exceed established height limits if they are designed to green building
standards (not necessarily LEED), incorporate renewable energy systems and/or green roofs.

Sustainability Ideas that can be addressed through Zoning

PARKING:

1. Allow greater flexibility for shared parking, perhaps in zones, with guidelines that acknowledge the reality of shared parking and provide incentives to participate.
2. Reduce number of cars permitted in accessory parking spaces.
3. Reduce parking lot size if based on usage study.
4. Change parking focus from floors (minimums) to caps (maximums).
5. Parking zones should be flexible to allow no parking in areas of high density, transit.
6. Allow front-faced non-residential parking if using permeable surfaces.
7. Require landscaping for off-street parking, include rain gardens.
8. Discourage individual parking options; provide incentives for transit.
9. Require permeable pavement wherever feasible.
10. ****In some cases, consider allowing on-street parking to count towards parking ceiling.**
11. ****Eliminate incentives to build underground parking (e.g. density bonus).**

Sustainability Ideas that cannot be addressed through Zoning

The following ideas, generated by the Sustainability Focus Group would typically be addressed by something other than the Zoning Code. Staff could provide more complete information on the ability to amend local ordinances to implement these suggestions and any limitations which may exist because of state and/or federal law.

1. Provide incentives for construction that meets green building standards.
2. Prohibit heated sidewalks/driveways.
3. Prohibit restrictive covenants on renewable energy.
4. Require businesses to turn off lights and signs when buildings are unoccupied.
5. Require solar on all commercial and institutional buildings.
6. Street trees should be placed and managed for maximum solar access.
7. Household grey water should be used for flushing toilets, irrigation.
8. Require % of irrigation water to be from collected grey water or harvested rainwater.
9. Require monitoring of infiltration systems to insure continued successful operation.
10. Allow for 100% on-site control or containment of water.
11. Allow composting toilets.
12. Neighborhood development standards for rain gardens – area/homeowner (e.g. Vilas).
13. Implement Passive House Standard (90% reduction in energy use) by removing obstacles (if any) to “new” architectural designs, and providing incentives for houses that achieve it
14. Implement Green Affordable Housing Land Trusts (see “The City-CLT Partnership” from Lincoln Institute. www.lincolninst.edu).
15. Neighborhood streets should be narrow with high curbs (to manage storm water runoff).
16. Combine sidewalks with no sidewalks (on one side of street only).
17. Require drive-up windows to close on air quality alert days.
18. Encourage greater variety of parking lot spaces.

14. Establish baseline criteria for determining sustainability of proposals covered by code.
15. Provide incentives for sustainable practices – foster innovative design, fast track green building.
16. Create “innovation zones” to permit cutting-edge ideas, perhaps utilizing overlay districts.
17. Enable retrofitting of existing neighborhoods for greater sustainability.
18. Codify sustainability elements of site design, e.g. landscaping, water retention, parking
and pedestrian connectivity.
