

We are trying to get a conditional use permit to enlarge and improve our loading zone and replacing gravel for concrete on our temporary outdoor storage next to 2117 and behind 2121 N Stoughton Rd, we need the extra space for our pallet making and repairing business, this space will be used mostly as a waiting area for the product until ready to be shipped out, this space will also serve as a loading and unloading dock. The plan is that we like to start by moving back the loading dock to the left of 2117 mark on blue about 15' back and pour about 8056.58 sf, at 8" thick white rebar reinforcements as needed, will also install a wood fence all around the back of these two buildings at a height of 8 ft as marked on black on the drawing, near the limits of the property, also to protect our product and to make the property safer and to look better, we'll also build a retaining wall along the edge of the parcel B as marked on the drawing in white color we will use only the space allowed, we will not make any changes to the property plans.

Thank you much and please feel free to call me Jose Medina in case of any questions at (608) 770-0365
