

ACCESSORY BUILDING HEIGHT MEASUREMENT

*Accessory buildings include but are not limited to detached garages, detached carports, and sheds.

From Madison's Zoning Code:

M.G.O. 28.134(1)(a)

"For accessory buildings and structures, height is measured from the average elevation of the approved grade at the front of the building to the highest point of the roof in the case of a flat roof, to the deck line of a mansard roof, and to the midpoint of the ridge of a gable, hip, or gambrel roof. The average height shall be calculated by using the highest ridge and its attendant eave. The eave point used shall be where the roof line crosses the side wall."
