

TO DO THE SEARCH:

Go to the area in question on the map and choose with search inspections, work orders:

This will open a search with those coordinates and hit search:

ADDING ASSET:

You can always add any asset to a WO. For inspections you'd have to exchange the asset if there is already one on there, but in this case since these no longer exist, there is no asset on them, so you'd just need to add it to them.

NOTE:

The asset is under ENTITY, NOT MAP LAYER, that is something different. This inspection shows no asset:
