PREVENT LITHIUM ION BATTERY FIRES

Get Plugged In To Lithium Ion Battery Safety!

Lithium ion batteries help keep you connected and take you on the go. They also store a lot of energy, can burn explosively, and may pose a serious threat if not properly cared for.

NEVER

- ✗ Purchase off-brand chargers.
- ✗ Charge devices under a pillow, on your bed, or on a couch.
- ✗ Store or charge your devices near your primary exit. If these devices catch on fire, you will not be able to escape.
- ✗ Put your lithium ion batteries in the trash.

ALWAYS

- ✔ Use the charger that came with your device.

- ✔ Look for a "UL" mark on your devices and chargers. Products that do not have this mark may not have been safety tested and could pose a fire hazard.

RECYCLE RESPONSIBLY

Lithium ion batteries cannot be thrown in the trash. Here's what to do!

- ✔ Put clear packing tape over the contact points of the battery.
- ✔ Recycle lithium ion batteries separate from other types of batteries.
- ✔ Scan QR code for complete recycling instructions and to find your nearest drop-off site.

Be safe. Stay informed. Visit MadisonFire.org!
