

Racial Integration
2010 Census

Dane County,
Wisconsin

1 Dot = 1 Person

Race

- White
- Black or African American
- American Indian and Alaska Native
- Asian, Native Hawaiian and Other Pacific Islander
- Some Other Race, Two or More Races

A multivariate mapping technique using dot density mapping is used to show both population density and minority concentrations.

One dot equals one person in the 2010 census.

The dots are placed randomly within each census block but are restricted to areas of residential land use. This restriction results in a map that gives a more accurate portrayal of where population exists on the ground versus the traditional choropleth map.
