

my existing garage and shop is 48 x 38. So I have to down size. I need space for my equipment I use in the maintenance of my rental property. This addition will fit in the dead space in the back yard, and will not affect the sun shine to my neighbors site

I have enough room to build a separate 24x24 building. but this would ruin the back yard. This is why I wish to expand the present garage & preserve open space.
